10am till 2pm US EST

Lab session from 4pm to 5pm US EST

On First and Second Days

Use the Zoom chat to ask questions, or raise a hand with 

In between class sessions

For a better Zoom experience

If you're watching in full-screen view and I'm sharing my screen, then from Zoom's "View options" menu *turn off* "Side-by-Side" mode.

My Setup and Yours

My Setup and Yours

Talking, Slides, and Live-Coding in RStudio

Follow along with RStudio yourself if you can

The course packet is also an RStudio project and the place
for your notes

Goals for this first session

Goals for this first session

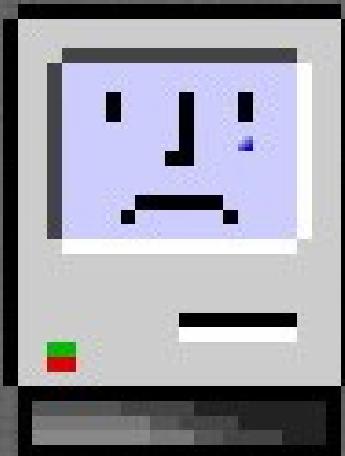

Some big-picture motivation & perspective

Getting familiar with RStudio and its relationship to R

Getting oriented to R and how it thinks

DATA ANALYSIS
is mostly
DATA WRANGLING

Wrangling data is frustrating

Can we make it **fun**?

Can we make it **fun**?

No.

Can we make it **fun**?

No.

⇒ Not *this* much fun, at any rate

OK but can we eliminate frustration?

OK but can we eliminate frustration?

Also no.

OK but can we eliminate frustration?

Also no.

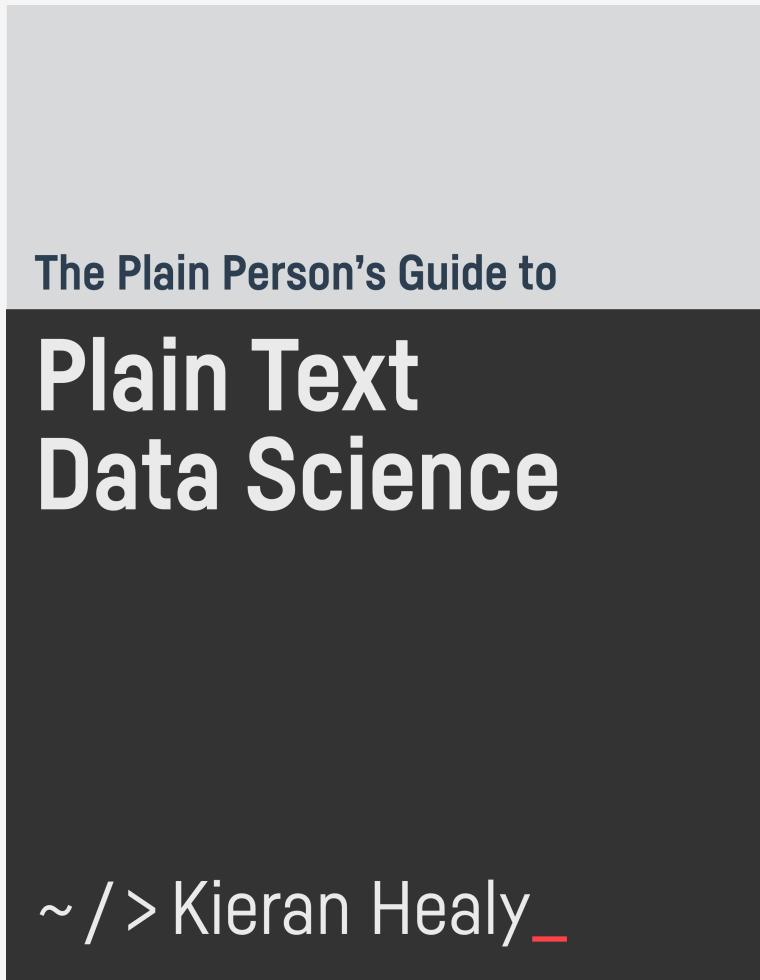

Sorry.

**HOWEVER, WE CAN
MAKE IT *WORK***

HOWEVER, WE CAN MAKE IT *WORK*

Also, it's weirdly satisfying once you get into it.

We take a broadly *Plain Text* approach

We take a broadly *Plain Text* approach

The Plain Person's Guide to

Plain Text Data Science

~ /> Kieran Healy _

Using R and the Tidyverse can be understood within this broader context.

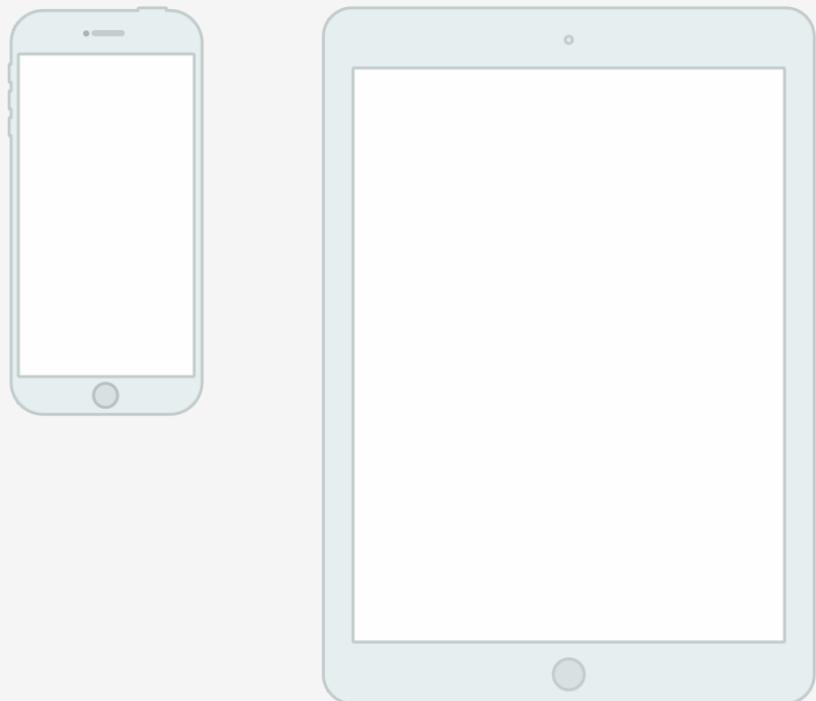

The same principles would apply to, e.g., using Python or similar tools.

Two revolutions in computing

Where the action is

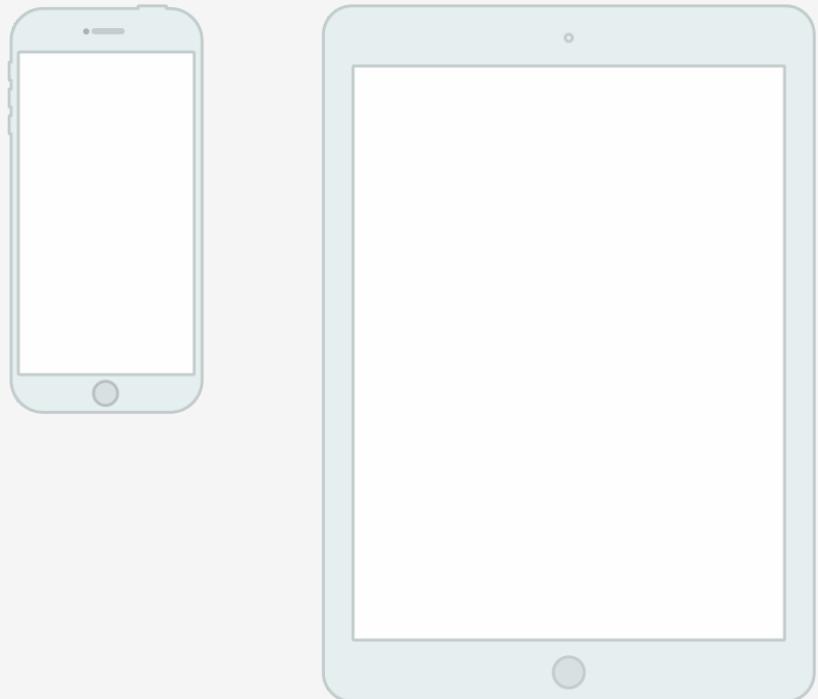

Where the action is

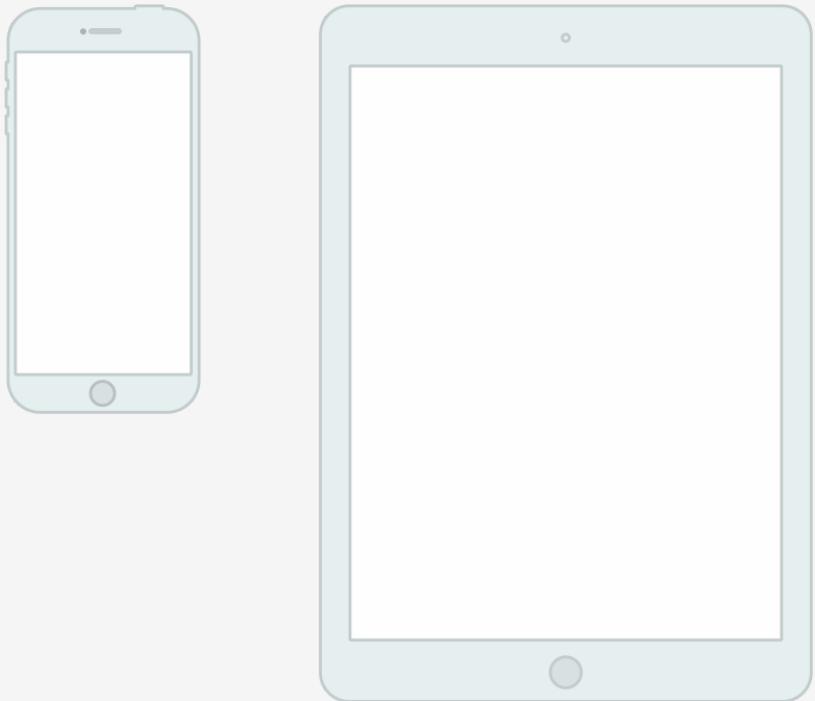

Touch-based user interface

Where the action is

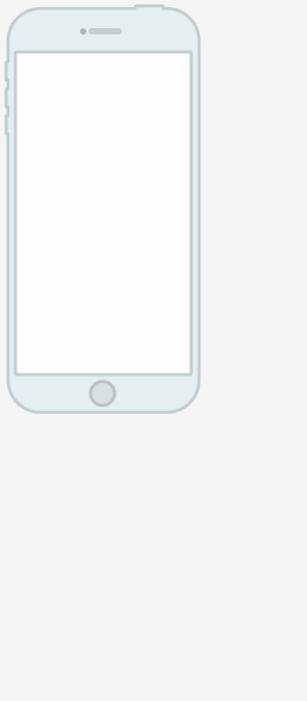

Touch-based user interface
Foregrounds a single application

Where the action is

Touch-based user interface
Foregrounds a single application
Dislikes multi-tasking*

Where the action is

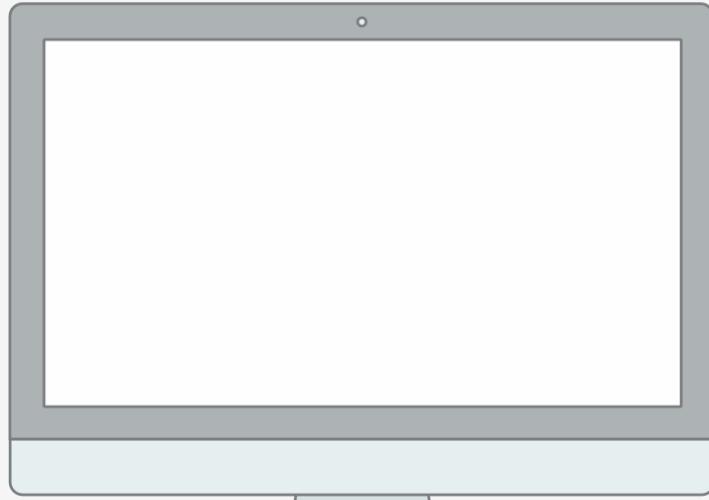

- Touch-based user interface
- Foregrounds a single application
- Dislikes multi-tasking*
- Hides the file system

*Multitasking

I mean, “Making different specialized applications and resources work together in the service of a single but multi-dimensional project”, not “Checking Twitter while also listening to a talk and waiting for an update from the school nurse.”

So why do we use these tools?

The research process is
intrinsically messy

The research process is *intrinsically messy*

A rough distinction: "Office" vs "Engineering" approaches

Questions

What is "real" in your project?

What is the final output?

How is it produced?

How are changes managed?

Different Answers

In the Office model

Formatted documents are real.

Intermediate outputs are cut and pasted
into documents.

Changes are tracked inside files.

Final output is often in the same format
you've been working in, e.g. a Word file, or
perhaps a PDF.

Different Answers

In the Office model

Formatted documents are real.

Intermediate outputs are cut and pasted into documents.

Changes are tracked inside files.

Final output is often in the same format you've been working in, e.g. a Word file, or perhaps a PDF.

In the Engineering model

Plain-text files are real.

Intermediate outputs are produced via code, often inside documents.

Changes are tracked outside files.

Final outputs are assembled programatically and converted to a desired output format.

Different strengths and weaknesses

Everyone knows Word, Excel, or Google Docs.

"Track changes" is powerful and easy.

Hm, why can't I remember how I made this figure?

Where did this table of results come from?

Paper_Submitted_Final_edits_FINAL_kh-1.docx

Different strengths and weaknesses

Everyone knows Word, Excel, or Google Docs.

"Track changes" is powerful and easy.

Hm, why can't I remember how I made this figure?

Where did this table of results come from?

Plain text is universally portable.

Push button, recreate analysis.

Why can't I make R do this simple thing?

This version control stuff is a pain.

Object of type 'closure' is not subsettable

Paper_Submitted_Final_edits_FINAL_kh-1.docx

Different strengths and weaknesses

Everyone knows Word, Excel, or Google Docs.

"Track changes" is powerful and easy.

Hm, why can't I remember how I made this figure?

Where did this table of results come from?

Plain text is universally portable.

Push button, recreate analysis.

Why can't I make R do this simple thing?

This version control stuff is a pain.

Object of type 'closure' is not subsettable

Each approach generates solutions to its own problems, too

INTO THE KITCHEN

RStudio is an IDE for R

A kitchen is an IDE for Meals

R & RStudio

The screenshot shows the RStudio IDE interface. The top menu bar includes File, Edit, Code, View, Plots, Session, Build, Debug, Profile, Tools, Window, and Help. The title bar indicates the current project is "covdata - main - RStudio".

The left pane contains the code editor with the following R Markdown code:

```
15  
16  
17 ## Loading the Package  
18  
19 The 'covdata' package aims to make data related to the COVID-19  
pandemic easily accessible to users of R. Once the package is  
installed, load it in the usual way:  
20  
21 library(covdata)  
22  
23 Loading the package makes a variety of datasets available for use.  
Because the data are in tibbles, the use of the 'tidyverse' suite of  
packages is strongly recommended, though it is not required. If you  
6:37 # Get Started with covdata
```

The right pane shows the Environment tab of the Global Environment panel, which lists the function "set". Below it is a file browser showing the contents of the "covdata" directory:

Name	Size	Modified
..		
.github	49 B	Apr 28, 2020, 2:03 PM
.gitignore	125 B	Jul 6, 2020, 9:00 AM
.Rbuildignore	20 KB	Aug 18, 2020, 12:18 PM
.Rhistory	2 KB	Jul 17, 2020, 1:04 PM
_pkgdown.yml	172 B	Apr 20, 2020, 2:57 PM
_sinewconfig.yml	395 B	Aug 21, 2020, 10:44 AM
covdata.Rproj		
data

R & RStudio

RStudio

R & RStudio

The screenshot shows the RStudio desktop application interface. The main window has the following components:

- Top Bar:** RStudio, File, Edit, Code, View, Plots, Session, Build, Debug, Profile, Tools, Window, Help.
- Title Bar:** stathorizons_0820 - master - RStudio.
- Left Panel:** A code editor showing a R Markdown file named "01_introduction.Rmd". The content includes metadata (title, author, date) and a section titled "## Data Visualization Notes".
- Middle Panel:** The Environment pane displays "Environment is empty".
- Right Panel:** The Files pane shows a directory tree for "stathorizons_0820" containing various R Markdown files (e.g., 01_introduction.Rmd, 02_get_started.Rmd, etc.) and other project files like LICENSE.md and README.md.
- Bottom Panel:** The Console pane contains R command history and output, including the loading of the testthat package and the creation of a test_file object.

A large red box highlights the Console pane, which contains the text:

Console: Type or send code here, see results

```
~/Documents/courses/stathorizons_0820/ 
Type 'demo()' for some demos, 'help()' for on-line help, or
'help.start()' for an HTML browser interface to help.
Type 'q()' to quit R.

knitr hook "anchor" is now available
Loading required package: testthat

Attaching package: 'testthat'

The following object is masked from 'package:devtools':

  test_file

>
```

R & RStudio

The screenshot shows the RStudio interface with a project titled "stathorizons_0820". The left pane displays an R Markdown file named "01_introduction.Rmd" containing metadata and introductory text. The right pane shows the "Environment" tab with a message "Environment is empty". A red box highlights the "Files" tab in the bottom right corner, which lists the contents of the project directory:

| Name | Size | Modified |
|-------------------------------|---------|------------------------|
| .. | | |
| .gitignore | 40 B | Jul 21, 2020, 11:16 AM |
| 01_introduction.Rmd | 4 KB | Jul 21, 2020, 11:16 AM |
| 02_get_started.Rmd | 3.3 KB | Jul 21, 2020, 11:16 AM |
| 03_make_a_plot.Rmd | 5.8 KB | Jul 21, 2020, 11:16 AM |
| 04_show_the_right_numbers.Rmd | 4.8 KB | Jul 21, 2020, 11:16 AM |
| 05_tables_and_labels.Rmd | 9.9 KB | Jul 21, 2020, 11:16 AM |
| 06_models.Rmd | 15 KB | Jul 21, 2020, 11:16 AM |
| 07_maps.Rmd | 12.5 KB | Jul 21, 2020, 11:16 AM |

| stathorizons_0820.Rproj | 205 B | Jul 22, 2020, 8:50 AM |

Project files, Plots, Help

R & RStudio

The screenshot shows the RStudio interface with several panes:

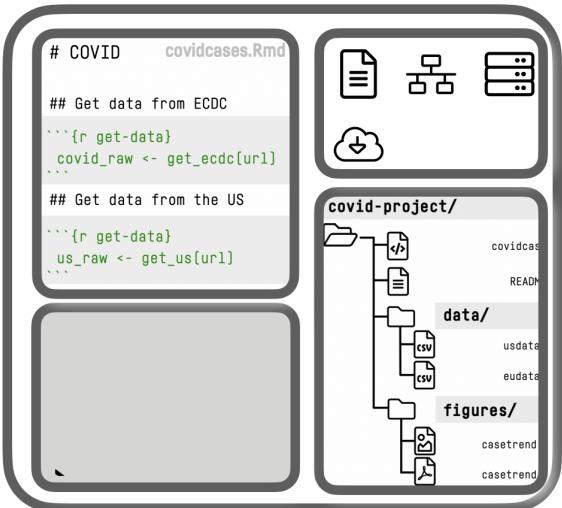

- Code Pane:** Displays the file `01_introduction.Rmd` containing R Markdown code. The code includes metadata (title, author, date, output) and content sections like "## Data Visualization Notes".
- Environment Pane:** Shows the Global Environment, which is currently empty.
- File Explorer:** Shows a directory structure for a project named `stathorizons_0820`. The contents include various Rmd files (e.g., `01_introduction.Rmd`, `02_get_started.Rmd`) and other project files like `.gitignore`, `LICENSE.md`, and `README.md`.
- Console Pane:** Displays R session logs, including the loading of the `testthat` package and the creation of a `knitr` hook.
- Jobs Pane:** Shows a list of running or completed R jobs.

A red box highlights the Environment pane, and the text "Inspect objects you create" is overlaid in red.

Inspect objects you create

R & RStudio

RStudio

Drive R

```
if (is.empty.model(mt)) {  
  x <- NULL  
  z <- list(coefficients = if (m1m)  
    matrix(NA_real_, 0,  
    ncol(y)) else numeric(), residuals = y,  
    fitted.values = 0 *  
    y, weights = w, rank = 0L, df.residual = if  
    (!is.null(w)) sum(w !=  
    0) else ny)
```

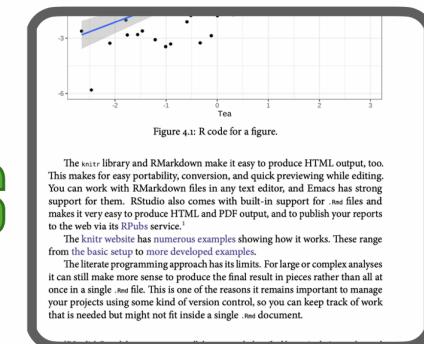

Figure 4.1: R code for a figure.

The `knitr` library and `Markdown` make it easy to produce HTML output, too. This makes for easy portability, conversion, and quick previewing while editing. You can work with R Markdown files in any text editor, and Emacs has strong support for them. RStudio also comes with built-in support for `.md` files and makes it very easy to produce HTML, and PDF output, and to publish your reports to the web via its RPubs service.

The `knitr` website has numerous examples showing how it works. These range from the basic setup to more developed examples.

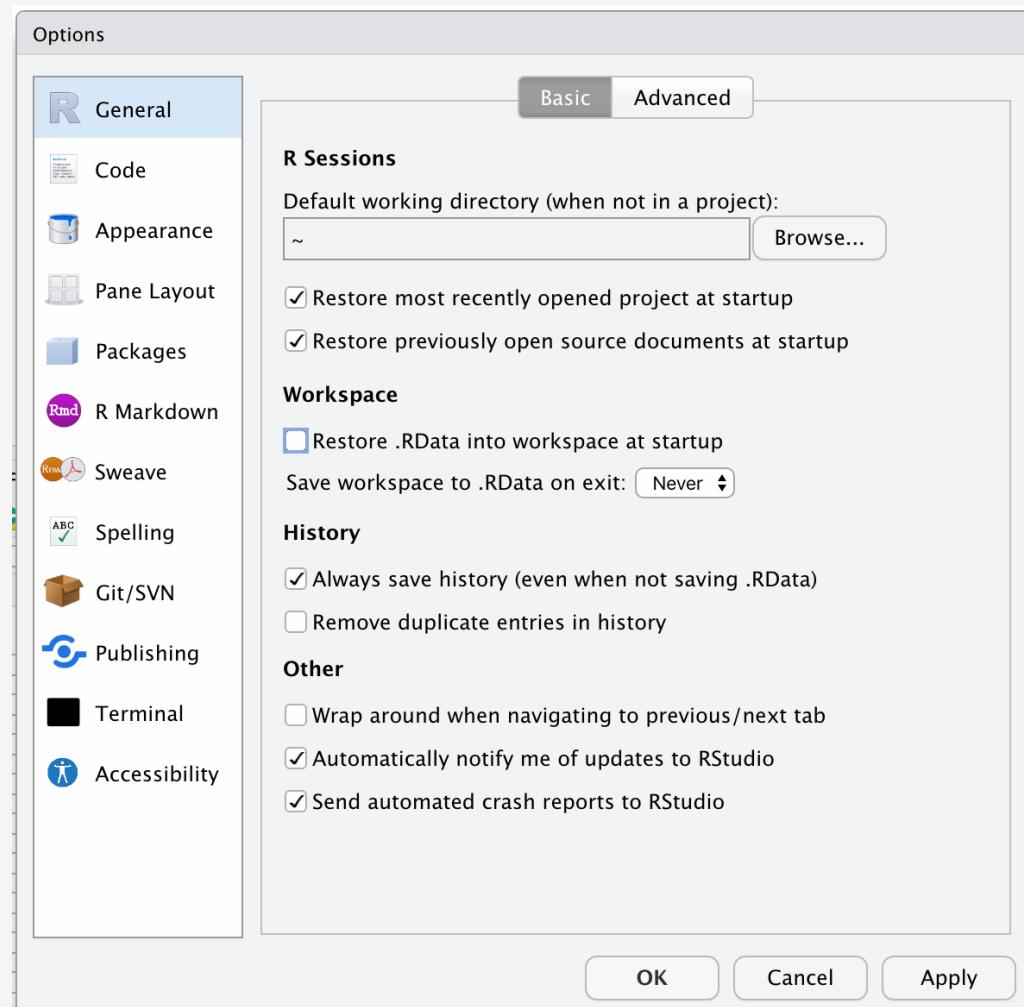

The literate programming approach has its limits. For large or complex analyses it can still make more sense to produce the final result in pieces rather than all at once in a single `.Rmd` file. This is one of the reasons it remains important to manage your projects using some kind of version control, so you can keep track of work that is needed but might not fit inside a single `.Rmd` document.

Generate Documents

View & Manage Environment

| Name | Type | Value |
|-------------|-----------------------------------|-------------------------------------|
| p | list [9] (S3: gg, ggplot) | List of length 9 |
